Original instructions

OMRON

Model **F3SJ-A□□□□P□□**

(Version 2)

SAFETY LIGHT CURTAIN

INSTRUCTION SHEET

Please read and understand this instruction sheet before storing, installing, programming, operating, maintaining, or disposing of the products. Please consult your OMRON representative if you have any questions or comments.

Please refer to the User's Manual for detailed instructions on usage.

OMRON EUROPE B.V. (Representative in EU)
Wegalaan 67-69. 2132 JD Hoofddorp
The NETHERLANDS

②

LEGISLATION AND STANDARDS

1. Application of a F3SJ sensor alone cannot receive type approval provided by Article 44-2 of the Labour Safety and Health Law of Japan. It is necessary to apply it in a system. Therefore, when using the F3SJ in Japan as a "safety system for pressing or shearing machines" prescribed in Article 42 of that law, the system must receive type approval.
2. The F3SJ is electro-sensitive protective equipment (ESPE) in accordance with European Union (EU) Machinery Directive Index Annex V, Item 2.
3. EC Declaration of Conformity
   OMRON declares that F3SJ is in conformity with the requirements of the following EC Directives:
   Machinery Directive 2006/42/EC
   EMC Directive 2004/108/EC
4. F3SJ is in conformity with the following standards:
   (1) European standards
   EN61496-1 (Type 4 ESPE), CLC/TS 61496-2 (Type 4 AOPD), EN61508-1 through -3 (SIL3), EN ISO 13849-1:2008 (Category 4, PL e)
   (2) International standards
   IEC61496-1 (Type 4 ESPE), IEC61496-2 (Type 4 AOPD), IEC61508-1 through -3 (SIL3), ISO 13849-1:2006 (Category 4, PL e)
   (3) JIS standards
   JIS B 9704-1 (Type 4 ESPE), JIS B 9704-2 (Type 4 AOPD)
   (4) North American Standards:
   UL61496-1(Type 4ESPE), UL61496-2(Type 4AOPD), UL508, UL1998, CAN/CSA C22.2 No.14, CAN/CSA C22.2 No.0.8
5. The F3SJ received the following approvals from the EU accredited body, TÜV SÜD Product Service GmbH:
   •EC Type-Examination in accordance with the EU Machinery Directive, Type 4 ESPE (EN61496-1), Type 4 AOPD (CLC/TS 61496-2)
   •TÜV SÜD Product Service Type Approval, Type 4 ESPE (EN61496-1), Type 4 AOPD (CLC/TS 61496-2), SIL1, 2, 3 (EN61508-1 through -3), EN ISO 13849-1:2008 (Category 4, PL e)
6. The F3SJ received the certificates of UL listing for US and Canadian safety standards from the Third Party Assessment Body UL.
   •Both are: Type 4 ESPE (UL61496-1), Type 4 AOPD (UL61496-2)
7. The F3SJ is designed according to the standards listed below. To make sure that the final system complies with the following standards and regulations, you are asked to design and use it in accordance with all other related standards, laws, and regulations. If you have any questions, consult with specialized organizations such as the body responsible for prescribing and/or enforcing machinery safety regulations in the location where the equipment is to be used.
   •European Standards: EN415-4, EN692, EN693
   •U.S. Occupational Safety and Health Standards: OSHA 29 CFR 1910.212
   •U.S. Occupational Safety and Health Standards: OSHA 29 CFR 1910.217
   •American National Standards: ANSI B11.1 to B11.19
   •American National Standards: ANSI/RIA 15.06
   •Canadian Standards Association CSA Z142, Z432, Z434
   •SEMI Standards SEMI S2
   •Ministry of Health, Labour and Welfare "Guidelines for Comprehensive Safety Standards of Machinery", Standard Bureau's Notification No. 501 dated June 1, 2001.

Suitability for Use

Omron Companies shall not be responsible for conformity with any standards, codes or regulationswhich apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.
NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PRECAUTIONS ON SAFETY

Regarding the alert symbols and meanings used for the safe uses
In order for our customers to use the F3SJ in safety, precautions are indicated in this manual with the alert symbols and statements such as the followings. Those safety precautions relate to the important descriptions that must be obeyed for the safe uses and operations. Be sure to obey the precautions. The following indictions and symbols are used for the descriptions.

⚠ WARNING	Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.

⃠	Indicates prohibited actions.
❗	Indicates mandatory actions.
⚡	Indicates the risk of electric shock.

Alert Statements in this Manual

For Users

⚠ WARNING

The F3SJ must be installed, configured, and incorporated into a machine control system by a sufficiently trained and qualified person. An unqualified person may not be able to perform these operations properly, which may cause a person to go undetected, resulting in serious injury. ❗

When changes are made to each function using the setting tool (F39-GWUM or F39-MC21), the administrator must manage the details of the changes and perform the changes. Accidental functional setting change may cause failure of human body detection, resulting in a serious injury. ❗

For Machines

⚠ WARNING

Do not use this sensor for machines that cannot be stopped by electrical control. For example, do not use it for a pressing machine that uses full-rotation clutch. Otherwise, the machine may not stop before a person reaches the hazardous part, resulting in serious injury. ⃠

Do not use the auxiliary output or external indicator output for safety applications. Human body may not be detected when F3SJ fails, resulting in serious injury. ⃠

For Installation

⚠ WARNING

Make sure to test the operation of the F3SJ after installation to verify that the F3SJ operates as intended. Make sure to stop the machine until the test is complete. Unintended function settings may cause a person to go undetected, resulting in serious injury. ❗

Make sure to install the F3SJ at the safe distance from the hazardous part of the equipment. Otherwise, the machine may not stop before a person reaches the hazardous part, resulting in serious injury. ❗

Install a protective structure so that the hazardous part of a machine can only be reached by passing through the sensor's detection zone. Install the sensors so that part of the person is always present in the detection zone when working in a machine's hazardous areas. If a person is able step into the hazardous area of a machine and remain behind the F3SJ's detection zone, configure the system with an interlock function that prevents the machine from being restarted. Failure to do so may result in serious injury. ❗

Install the interlock reset switch in a location that provides a clear view of the entire hazardous area and where it cannot be activated from within the hazardous area. ❗

The F3SJ cannot protect a person from an object flying from a hazardous area. Install protective cover(s) or fence(s). ❗

To prevent personnel approach to dangerous part of the machine through an area disabled by the fixed blanking function, you must install a protective structure to cover the whole disabled area. Failure to do so may cause failure of human body detection, resulting in a serious injury. ❗

You must ensure that a test rod is detected for all detection areas except where fixed blanking function is used. Failure to do so may cause failure of human body detection, resulting in a serious injury. ❗

Detection capability gets larger when fixed/floating blanking function is used. You must use the detection capability for fixed and floating blanking functions. Failure to do so may cause failure of machine stop before reaching the machine's dangerous part, resulting in a serious injury. ❗

You must ensure that the system works as you intended after configuring floating blanking.Failure to do so may result in serious injury. ❗

Warning zone output is non-safety output. You must not include it to calculation of safety distance. Otherwise safety distance may be reduced, resulting in serious injury. ⃠

A warning zone CANNOT be used for safety applications. Always install your system so that a detection zone should be passed before reaching a source of danger. ⃠

The muting and override functions disable the safety functions of the device. You must ensure safety using other method when these functions are operating. ❗

Install muting sensors so that they can distinguish between the object that is being allowed to pass through the detection zone and a person. If the muting function is activated by the detection of a person, it may result in serious injury. ❗

Muting lamps (external indicators) that indicate the state of the muting and override functions must be installed where they are clearly visible to workers from all the operating positions. ❗

Muting related time must be properly configured for its application by a sufficiently trained and qualified person, and the person must have responsibility for settings, especially when setting the muting time limit to infinite. ❗

Use independent 2 input devices for muting inputs. ❗

You must install F3SJ, muting sensor, and physical barrier, and configure time settings for muting so that an operator should not enter hazardous zone. ❗

A switch to activate the override function must be a hold-to-run device such as a spring return key switch and must be installed in a location that provides a clear view of the entire hazardous zone and where it cannot be activated from within the hazardous zone.Make sure that nobody is in the hazardous area before activating the override function. ❗

Install the sensor system so that it is not affected by the reflective surface of the F3SJ. ❗

When using more than 1 set of F3SJ, install them so that mutual interference does not occur, such as by configuring series connections or using physical barriers between adjacent sets. ❗

Make sure that the F3SJ is securely mounted and its cables and connectors are properly connected. ❗

Make sure that foreign material such as water, oil, or dust does not enter the F3SJ or the connector while the cap is removed. ❗

Do not use the sensor system with mirrors in a retro-reflective configuration. Doing so may hinder detection. It is possible to use mirrors to "bend" the detection zone to a 90-degree angle. ❗

Perform an inspection for all F3SJ as described in "Chapter 6 Checklists" of User's manual. When using series connections,perform inspections for every connected F3SJ. ❗

For Wiring

⚠ WARNING

Connect the load between the output and 0V line (PNP output). Connecting the load between the output and +24V line will result in a dangerous condition because operation is reversed to ON when blocked. ❗

Do not short-circuit the output line to the +24V line. Otherwise, the output is always ON. Also, the 0V of the power supply must be grounded so that output does not turn ON due to grounding of the output line. ⃠

Configure the system by using the optimal number of safety outputs that satisfy the requirements of the necessary safety category. ❗

Do not connect each line of F3SJ to a DC power supply of more than 24VDC+20%. Also, do not connect to an AC power supply. Failure to do so may result in electric shock. ⚠

For the F3SJ to comply with IEC 61496-1 and UL 508, the DC power supply unit must satisfy all of the following conditions:
• Must be within the rated power voltage (24V DC ± 20%)
• Must have tolerance against the total rated current of devices if it is connected to multiple devices
• Must comply with EMC directives (industrial environment)
• Double or reinforced insulation must be applied between the primary and secondary circuits
• Automatic recovery of overcurrent protection characteristics (reversed L sagging)
• Output holding time must be 20ms or longer
• Must satisfy output characteristic requirements for class 2 circuit or limited voltage current circuit defined by UL508
• Must comply with laws and regulations, regarding EMC and electrical equipment safety, of the country or region where the F3SJ is used (Ex: In EU, the power supply must comply with the EMC Directive and the Low Voltage Directive.) ❗

Double or reinforced insulation from hazardous voltage must be applied to all input and output lines. Failure to do so may result in electric shock. ⚡

Extension of the cable must be within a specified length. If it isn't, safety function may not work properly, resulting in danger. ❗

Other

⚠ WARNING

To use the F3SJ in PSDI mode (Reinitiation of cyclic operation by the protective equipment), you must configure an appropriate circuit between the F3SJ and the machine. For details about PSDI, refer to OSHA1910.217, IEC61496-1, and other relevant standards and regulations. ❗

Do not try to disassemble, repair, or modify this product. Doing so may cause the safety functions to stop working properly. ⃠

Do not use the F3SJ in environments where flammable or explosive gases are present. Doing so may result in explosion. ⃠

Perform daily and 6-month inspections for the F3SJ. Otherwise, the system may fail to work properly, resulting in serious injury. ❗

PRECAUTIONS FOR SAFE USE

Make sure to observe the following precautions that are necessary for ensuring safe use of the product.
• Thoroughly read this manual and understand the installation procedures, operation check procedures, and maintenance procedures before using the product.
• Loads must satisfy both of the following conditions:
  -Not short-circuited
  -Not used with a current that is higher than the rating
• Do not drop the product.
• Dispose of the product in accordance with the relevant rules and regulations of the country or area where the product is used.

PRECAUTIONS FOR CORRECT USE

Observe the precautions described below to prevent operation failure, malfunctions, or undesirable effects on product performance.

■Installation environment
Do not install the F3SJ in the following types of environments:
•Areas exposed to intense interference light, such as direct sunlight
•Areas with high humidity where condensation is likely to occur
•Areas where corrosive gases are present
•Areas exposed to vibration or shock levels higher than in the specification provisions
•Areas where the product may come into contact with water
•Areas where the product may get wet with oil that can solve adhesive
Do not use radio equipment such as cellular phones, walkie-talkies, or transceivers near the F3SJ.
This is a class A product. In residential areas it may cause radio interference. in which case the Responsible Person may be required to take adequate measures to reduce interference.

■Wiring and installation
•Make sure to perform wiring while the power supply is OFF. Otherwise, the F3SJ may fail to operate due to the diagnosis function.
•Do not short-circuit output lines to +24V line. Otherwise a fault of F3SJ may occur.
•When extending the communication line with a cable (twisted-pair wire) other than the dedicated cable (F39-JC**), use a cable with the same or superior specification. Connect the shield to the 0V line.
•When replacing the cable connectors with other types of connectors, use connectors that provide a protection grade of IP54 or higher.
•Properly perform the wiring after confirming the signal names of all the terminals.
•Do not operate the control system until 2 seconds or more (2.2 seconds or more in case of series connection) after turning ON the power of the F3SJ.
•Be sure to route the F3SJ cable separate from high-potential power lines or through an exclusive conduit.
•When using a commercially available switching regulator power supply, make sure to ground the FG terminal (frame ground terminal).
•Install the emitter and receiver so that their vertical direction should match.
•If the protective height is 600 mm or more, use intermediate mounting brackets of specified quantities and locations according to the dimensions.
If the brackets described above are not used, ratings and performance cannot be not met.

■Cleaning
Do not use thinner, benzene, or acetone for cleaning, because they affect the product's resin parts and paint on the case.

■Object detection
The F3SJ cannot detect transparent and/or translucent objects.

RATINGS

■Ratings/Specifications
In the type names in this table, the **** contain the 4 digits indicating the protective height (mm).

		F3SJ-A****P14	F3SJ-A****P20	F3SJ-A****P25	F3SJ-A****P30	F3SJ-A****P55
Detection capability		Opaque objects Diameter 14mm	Opaque objects Diameter 20mm	Opaque objects Diameter 25mm	Opaque objects Diameter 30mm	Opaque objects Diameter 55mm
Beam gap		9mm	15mm	20mm	25mm	50mm
Number of beams		26 to 234	16 to 166	13 to 125	10 to 100	6 to 50
Protective height		245 to 2,117mm	245 to 2,495mm	260 to 2,500mm	245 to 2,495mm	270 to 2,470mm
Lens diameter		Diameter 5mm				
Operating range		0.2 to 9m (for protective height up to 1649 mm) 0.2 to 7m (for protective height 1655 mm or greater) (Operating range can be reduced to 0.5m through the setting tool)				
Response time		ON to OFF: 10ms to 27.5ms max., OFF to ON: 40ms to 110ms max. (when incidence is stable). Refer to the reverse side for details.				
Startup waiting time		2s max. (2.2s max in case of series connection)				
Power supply voltage(Vs)		24VDC ± 20% (ripple p-p10% max.)				
Current consumption (no load)	Emitter	Up to 50 beams: 76 mA max., 51 to 100 beams: 106 mA max., 101 to 150 beams: 130 mA max., 151 to 200 beams: 153 mA max., 201 to 234 beams: 165 mA max.				
	Receiver	Up to 50 beams: 68 mA max., 51 to 100 beams: 90 mA max., 101 to 150 beams: 111 mA max.,151 to 200 beams: 128 mA max., 201 to 234 beams: 142 mA max.				
Light source		Infrared LED (870nm wavelength)				
Effective aperture angle (EAA)		Within ±2.5 ° for the emitter and receiver at a detection distance of at least 3 m according to IEC61496-2				
Safety outputs(OSSD)		PNP transistor outputs x 2, Load current 300mA max, Residual voltage 2V max. (except for voltage drop due to cable extension)(including inductance load), Maximum capacity load 2.2 μF, Leakage current 1mA max. (This may be different from previously used logic (ON/OFF) because safety circuit is used.)				
Auxiliary output 1 (Non-safety output)		PNP transistor output x 1, Load current 300mA max., Residual voltage 2V max. (except for voltage drop due to cable extension), Leakage current 1mA max.				
Auxiliary output 2 (non-safety output, afunction for a basic system)		PNP transistor output x 1, Load current 50mA or less, Residual voltage 2V or less (excluding influence by cable extension), Leakage current 1mA or less				
External indicator output (Non-safety output)		Connectable external indicator - Incandescent lamp : 24VDC, 3 to 7W - LED lamp : Load current 10 to 300mA max. Leakage current 1mA max.(An indicator cable F39-JJ3N or F39-A01P*PAC is required when using an external indicator.)				
Output operation mode		Safety outputs : ON when receiving light Auxiliary output 1 : Reverse output of safety output (operation mode can be changed by the setting tool) Auxiliary output 2: Turns ON when 30,000 hours of power-on time passes (operation mode can be changed by the setting tool) External indicator output 1: Reverse output of safety output (for basic system), ON during muting/override (for muting system) (Operation mode can be changed by the setting tool) External indicator output 2: ON in lockout (for basic system), ON during muting/override (for muting system) (operation mode can be changed by the setting tool)				
Input voltage		Test input, interlock selection input, reset input, and muting input are all: ON voltage: 9 to 24V(Vs) (sink current 3mA max.) OFF voltage: 0 to 1.5V, or open External device monitoring input is: ON voltage: 9 to 24V(Vs) (sink current 5mA max.) OFF voltage: 0 to 1.5V, or open				
Indicators	Emitter	Incident light level indicators (green LED x 2, orange LED x 3): ON based on the amount of incident light Error mode indicators (red LED x 3): Blink to indicate error details Power indicator (green LED x 1): ON while power is ON Interlock indicator (yellow LED x 1): ON when in interlock/Blinks when in lockout External device monitoring indicator [muting input 1 indicator], Blanking/ Test indicator [muting input 2 indicator] (green LED x2): ON/Blink according to function				
	Receiver	Incident light level indicators (green LED x 2, orange LED x 3): ON based on the amount of incident light Error mode indicators (red LED x 3): Blink to indicate error details OFF-state indicator (red LED x 1): ON when safety outputs are OFF/ Blinks when in lockout ON-state indicator (green LED x 1): ON when safety outputs are ON Muting error indicator, Blanking/Test indicator (green LED x 2): ON/Blink according to function				
Mutual interference prevention function		Interference light avoidance algorithm, Operating range change function				
Series connection		Time division emission by series connection - Number of connections: Up to 4 sets - Total number of beams: Up to 400 - Maximum cable length between 2 sets of sensors: 15m				
Test function		- Self-test (After power ON, and during operation) - External test (light emission stop function by test input)				
Safety-related functions		- Start interlock, restart interlock (The setting tool is required when muting function is used) - External device monitoring - Muting (Includes lamp breakage detection and override functions. F39-CN6 key cap for muting is required) - Fixed blanking (configuration by the setting tool is required) - Floating blanking (configuration by the setting tool is required)				
Connection method		Connector method (M12, 8-pin)				
Protection circuit		Output short-circuit protection, and power supply reverse polarity protection				
Ambient temperature		During operation: -10 to 55°C (without freezing), During storage: -30 to 70°C				
Ambient humidity		During operation: 35 to 85%RH (no condensation), During storage: 35 to 95%RH				
Ambient light intensity		Incandescent lamp: receiving-surface light intensity of 3,000 Ix max., Sunlight: receiving-surface light intensity of 10,000 Ix max.				
Insulation resistance		20MΩ or higher (500VDC)				
Dielectric strength voltage		1, 000VAC, 50/60Hz, 1min				
Degree of protection		IP65 (IEC60529)				
Vibration resistance		Malfunction: 10 to 55Hz, Multiple amplitude of 0.7mm, 20 sweeps each in X, Y, and Z directions				
Shock resistance		Malfunction: 100m/s2, 1,000 times each in X, Y, and Z directions				
Connection cable, Series connection cable (F39-JJR*L, JJR3W)		Dia. 6 mm, 8-wire (0.15mm2 x 8) with braided shield, Allowable bending radius R5mm				
Extension cable (F39-JC*A,JC*B,JC*C)		Dia. 6.6 mm, 8-wire (0.3mm2 x 4P, conductor resistance 0.058 ohm/m), with braided shield,Allowable bending radius of R36mm. (To extend a cable, use an equivalent or higher-performance cable (twisted-pair wire) , and do not use the cable in the same duct as that for high-voltage cables or power cables) For details about extension lengths (Power Cable Length), refer to next page				
Material		Casing (including metal parts on both ends): Aluminum, zinc die-cast Cap: ABS resin Optical cover: PMMA resin (acrylic) Cable: Oil resistant PVC				
Weight (packaged)		- F3SJ-A****P14 Weight (g)=(protective height) x 1.7+ α - F3SJ-A****P20/F3SJ-A****P25/F3SJ-A****P30 Weight (g)=(protective height) x 1.5+ α - F3SJ-A****P55 Weight (g)=(protective height) x 1.4+ α The values for α are as follows: When protective heightis between 245 and 596mm, α=1100 When protective heightis between 600 and 1130mm, α=1500 When protective heightis between 1136 and 1658mm, α=2000 When protective heightis between 1660 and 2180mm, α=2400 When protective heightis between 2195 and 2500mm, α=2600				
Accessories		instruction sheet, top and bottom mounting brackets, intermediate mounting brackets *1, error mode label, user's manual (CD-ROM) *1 The number of intermediate mounting brackets depends on the total length of the F3SJ. - F3SJ total length is from 600 to 1,130mm: 1 set for each the emitter and receiver is included - F3SJ total length is from 1136 to 1,658mm: 2 sets for each the emitter and receiver are included - F3SJ total length is from 1660 to 2,180mm: 3 sets for each the emitter and receiver are included - F3SJ total length is from 2195 to 2500mm: 4 sets for each the emitter and receiver are included				
Applicable standards		IEC61496-1, EN61496-1, UL61496-1 Type 4ESPE (Electro-Sensitive Protective Equipment) IEC61496-2, CLC/TS 61496-2, UL61496-2 Type 4AOPD (Active Opto-electronic Protective Devices) IEC61508, EN61508 SIL3, EN ISO 13849-1:2008 (Category 4, PL e), ISO 13849-1:2006 (Category 4, PL e)

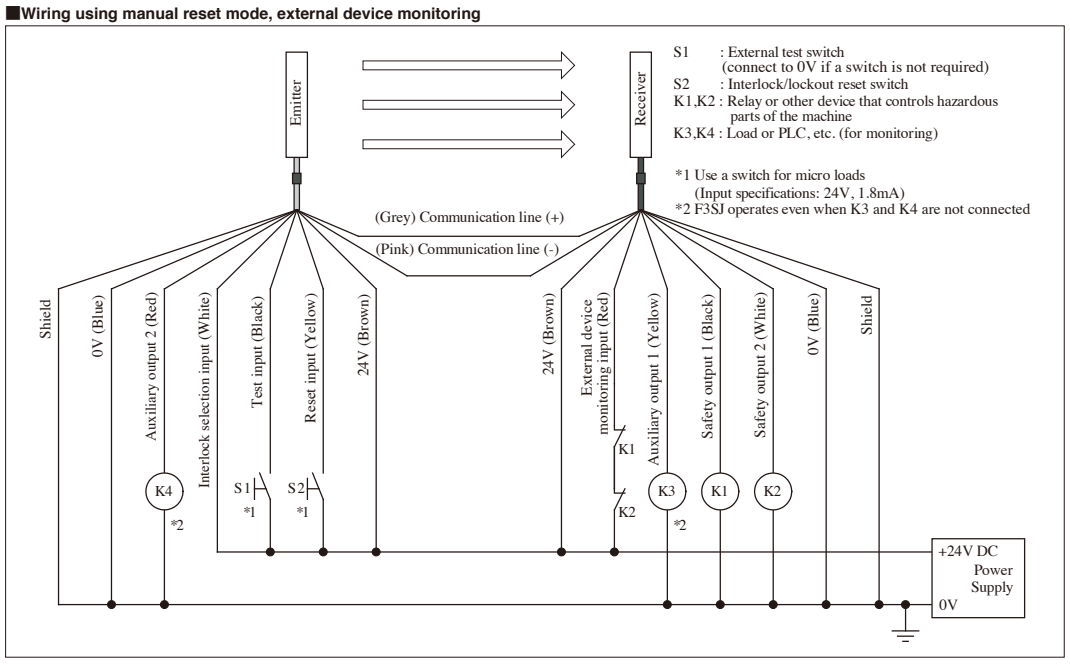
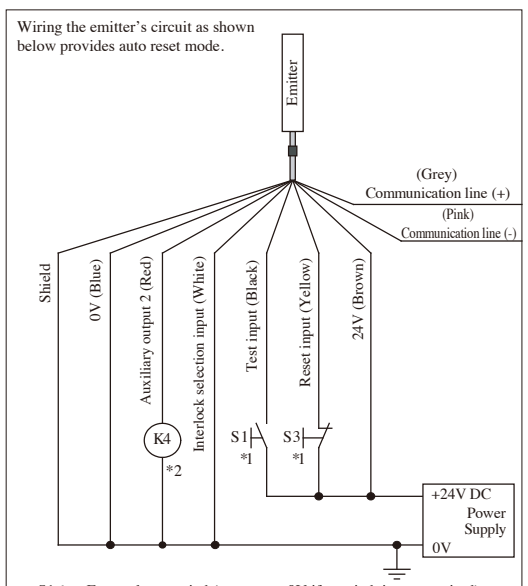
Wiring Diagrams

[Basic System]

■Wiring using manual reset mode, external device monitoring



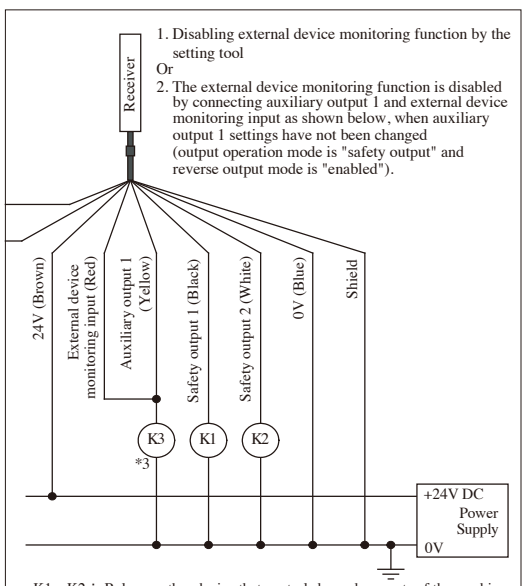
■ Wiring for auto reset mode



S1 : External test switch(connect to 0V if a switch is not required)
S3 : Lockout reset switch (connect to 24V if a switch is not required)
K4 : Load or PLC, etc. (for monitoring)

*1 Use a switch for micro loads. (Input specifications: 24V, 1.8mA)
*2 F3SJ can operate even if K4 is not connected.

■Wiring when external device monitoring function is not used

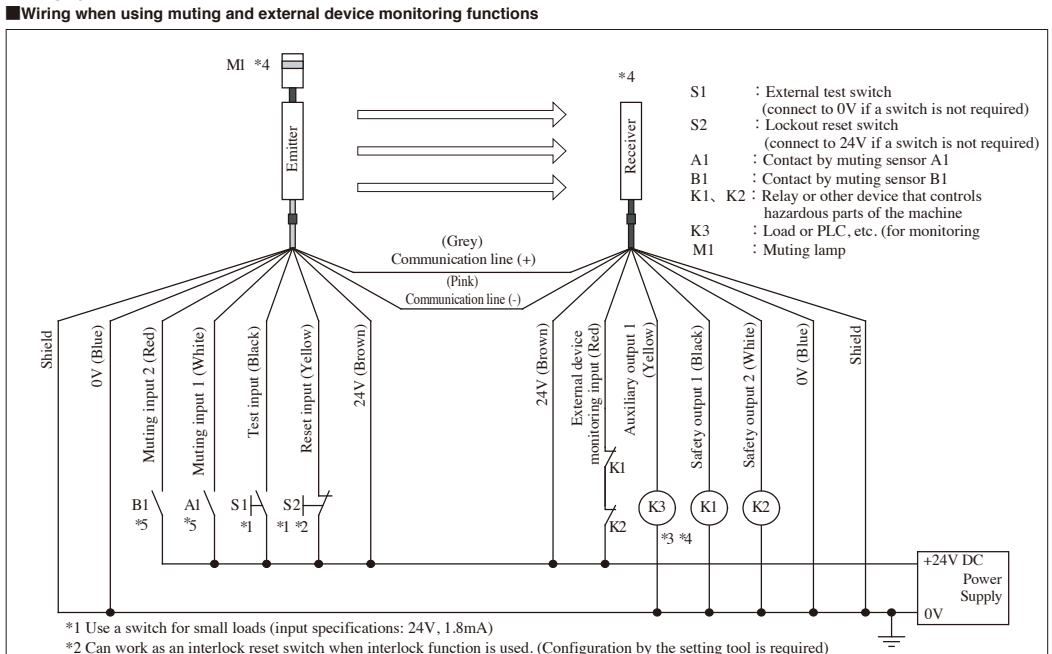


K1、K2 : Relay or other device that controls hazardous parts of the machine
K3 : Load or PLC, etc. (for monitoring)

*3 F3SJ can operate even if K3 is not connected.
If K3 is not required, connect auxiliary output 1 to external device monitoring input only.

[Muting System]

■Wiring when using muting and external device monitoring functions



*1 Use a switch for small loads (input specifications: 24V, 1.8mA)
*2 Can work as an interlock reset switch when interlock function is used. (Configuration by the setting tool is required)
*3 F3SJ operates even when K3 is not connected.
*4 Connect a muting lamp to at least any one of external indicator output1, external indicator output2, or auxiliary output 1 . To connect a muting lamp to the auxiliary output 1, you must use the setting tool to change configuration.
*5 The 2-Wire sensor cannot be used.

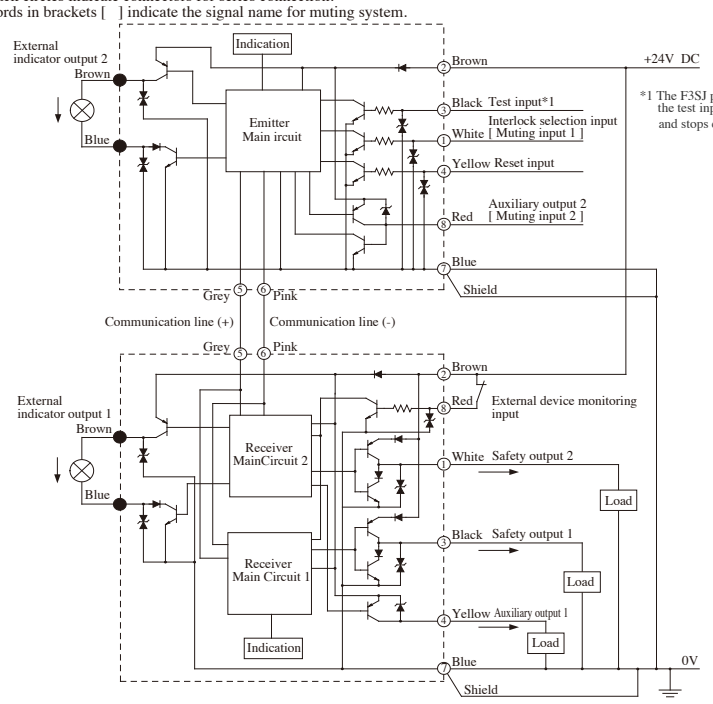
■ Wiring when external device monitoring function is not required

Wiring diagram is the same as that for "Wiring when external device monitoring function is not used" of the basic system.

Input/Output Circuit

■Input/output circuit

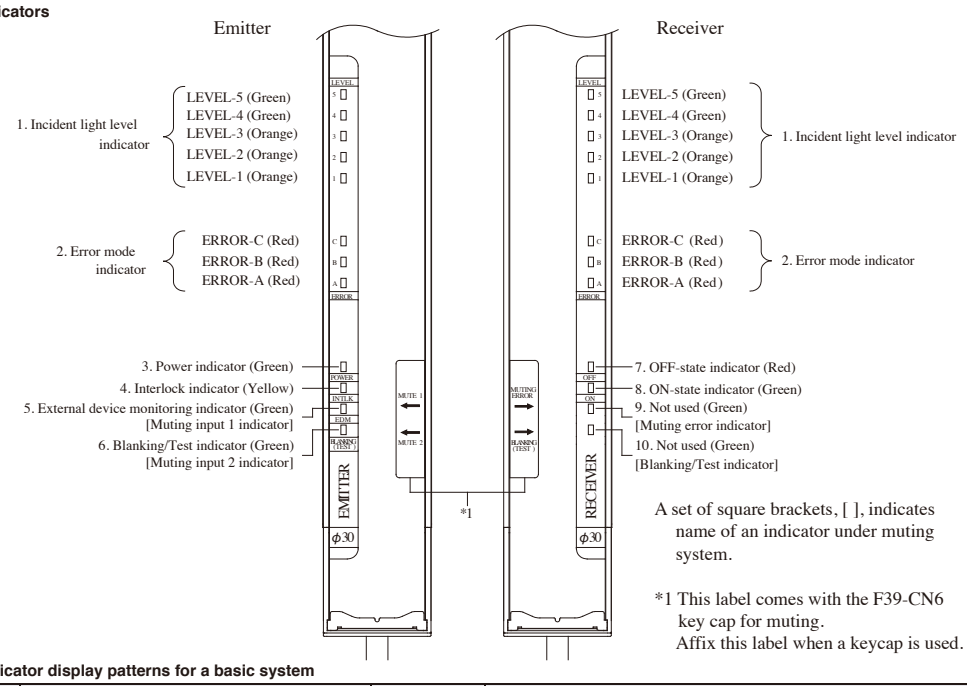
The numbers in white circles indicate the connector's pin numbers.
The black circles indicate connectors for series connection.
The words in brackets [ ] indicate the signal name for muting system.



*1 The F3SJ performs normal operation when the test input is opened or short-circuited to 0V and stops emission when the test input is short-circuited to 24V.

Indicator Display Patterns

■Indicators



A set of square brackets, [ ], indicates name of an indicator under muting system.

*1 This label comes with the F39-CN6 key cap for muting.
Affix this label when a keycap is used.

■Indicator display patterns for a basic system

No.	Indicators		ON/Blinking	Description
1	Incident light level indicator	LEVEL-1 to 5	ON	Indication status of LEVEL-1 to 5 shows the incident light level status of the F3SJ.
2	Error mode indicator	ERROR-A to C	ON/Blinking	Turns ON or blinks only when the F3SJ enters lockout, and the cause of the error is indicated by the status of ERROR-A to C indicators. When F3SJ are series-connected, the error mode indicator lamps turn ON or blink according to the details of each error. Affix the error mode label (included) near the F3SJ to allow for quick trouble shooting when errors occur. For details about error mode, refer to " ■ Indication patterns of error mode indicator".
3	Power indicator	POWER	ON	Turns ON while the power is ON.
			Blinking	Blinks under maintenance status.
4	Interlock indicator	INTLK	ON	Turns ON when F3SJ is in interlock state.
			Blinking	Blinks when in lockout.
5	External device monitoring indicator	EDM	ON	Turns ON when an input is given to external device monitoring input.
6	Blanking/Test indicator	BLANKING /TEST	ON	Turns ON when the blanking function and warning zone function are enabled.
			Blinking	Blinks when external test is being performed.
7	OFF-state indicator	OFF	ON	Turns ON when safety outputs are OFF.
			Blinking	Blinks at following states; -Lockout state -One or more beams are blocked during the maintenance status
8	ON-state indicator	ON	ON	Turns ON when safety outputs are ON.
			Blinking	Blinks when no beams are blocked during the maintenance status.

10	—	—	—	—

■Indicator display patterns for a muting system (Indicator display different from a basic system are described.)

No.	Indicators		ON/Blinking	Description
5	Muting input 1 indicator	MUTE1	ON	Turns ON when an input is given to muting input 1.
			Blinking	Blinks under muting/override.
6	Muting input 2 indicator	MUTE2	ON	Turns ON when an input is given to muting input 2.
			Blinking	Blinks under muting/override.
9	Muting error indicator	MUTING ERROR	ON	Turns ON during a muting error.
10	Blanking/Test indicator	BLANKING /TEST	ON	Turns ON when the blanking function is enabled.
			Blinking	Blinks when external test is being performed.

■Indication patterns of the incident light level indicator

ON ■ OFF

1 2 3 4 5	Incident light level
○ ○ ○ ○ ○	170% or higher of safety output ON level
○ ○ ○ ○ ■	From 130 to less than 170% of safety output ON level
○ ○ ○ ■ ■	From 100 to less than 130% of safety output ON level
○ ○ ■ ■ ■	From 75 to less than 100% of safety output ON level
○ ■ ■ ■ ■	From 50 to less than 75% of safety output ON level
■ ■ ■ ■ ■	Less than 50% of safety output ON level

Operation is possible with incident light level of 100% or more, but to ensure stability, operate when all incident light level indicators

■ Indication patterns of error mode indicator

ON ☼ Blinking ■ OFF

A B C	Main cause of error
○ ■ ☼	Mutual interference or disturbance light.
○ ☼ ☼	Power supply voltage of F3SJ is out of rated range. Insufficient current capacity ofpower supply.
○ ○ ■	Light incidence to a blanking beam.
○ ☼ ■	Breakage, incorrect wiring of communication line, disconnection of series-connection cable, influence of noise, or other errors.
○ ☼ ☼	The models of the emitter and receiver in a set are different.
☼ ○ ■	Function setting value configured by the setting tool is out of valid range.
☼ ○ ○	End cap is not attached. Failure of internal circuit of F3SJ.
■ ☼ ■	Relay is welded or recovery time is too long. Incorrect wiring or breakage of external device monitoring line.
☼ ■ ■	Incorrect wiring or breakage of interlock selection input line or reset input line.
☼ ○ ■	Incorrect wiring or breakage of reset input line for a muting system.
■ ■ ☼ ■ ☼ ☼	Incorrect wiring of safety output 1 or 2. Failure of safety output circuit. Incorrect wiring or breakage of series-connection cable.
■ ○ ☼	Incorrect wiring or circuit breakage of external indicator output.
○ ○ ☼	Auxiliary output 1 is detached or broken.
☼ ■ ☼	Broken series connection cable.
○ ■ ■	Incorrect wiring or breakage of communication line.
☼ ☼ ☼	Effect of noise. F3SJ Failure of internal circuit.

Refer to F3SJ User's manual for details.

Response Times/Power Cable Length

■ Response times

F3SJ-A****P14

Protective height [mm]	Number of beams	Response time (ON to OFF) [ms]	Response time (OFF to ON) [ms]
245～272	26～29	11	44
281～389	30～42	12	48
398～506	43～55	13	52
515～614	56～67	14	56
623～731	68～80	15	60
740～1019	81～112	17.5	70
1028～1307	113～144	20	80
1316～1595	145～176	22.5	90
1604～1883	177～208	25	100
1892～2117	209～234	27.5	110

F3SJ-A****P20

Protective height [mm]	Number of beams	Response time (ON to OFF) [ms]	Response time (OFF to ON) [ms]
245	16	10	40
260～440	17～29	11	44
455～635	30～42	12	48
650～830	43～55	13	52
845～1010	56～67	14	56
1025～1205	68～80	15	60
1220～1685	81～112	17.5	70
1700～2165	113～144	20	80
2180～2495	145～166	22.5	90

F3SJ-A****P25

Protective height [mm]	Number of beams	Response time (ON to OFF) [ms]	Response time (OFF to ON) [ms]
260～320	13～16	10	40
340～580	17～29	11	44
600～840	30～42	12	48
860～1100	43～55	13	52
1120～1340	56～67	14	56
1360～1600	68～80	15	60
1620～2240	81～112	17.5	70
2260～2500	113～125	20	80

F3SJ-A****P30

Protective height [mm]	Number of beams	Response time (ON to OFF) [ms]	Response time (OFF to ON) [ms]
245～395	10～16	10	40
420～720	17～29	11	44
745～1045	30～42	12	48
1070～1370	43～55	13	52
1395～1670	56～67	14	56
1695～1995	68～80	15	60
2020～2495	81～100	17.5	70

F3SJ-A****P55

Protective height [mm]	Number of beams	Response time (ON to OFF) [ms]	Response time (OFF to ON) [ms]
270～770	6～16	10	40
820～1420	17～29	11	44
1470～2070	30～42	12	48
2120～2470	43～50	13	52

For series connections, use the calculations below.
When 2 sets are series-connested
Response time (ON to OFF) :
Response time of 1st unit + Response time of 2nd unit -1 (ms)
Response time (OFF to ON) :
Response time from the above calculation x 4 (ms)
When 3 sets are series-connested
Response time (ON to OFF) :
Response time of 1st unit + Response time of 2nd unit + Response time of 3rd unit - 5 (ms)
Response time (OFF to ON) :
Response time from the above calculation x 5 (ms)
When 4 sets are series-connested
Response time (ON to OFF) :
Response time of 1st unit + Response time of 2nd unit + Response time of 3rd unit + Response time of 4th unit - 8 (ms)
Response time (OFF to ON) :
Response time from the above calculation x 5 (ms)

■ Power cable length

Extension of power cable must be the length shown below or shorter:
In case F3SJ is directly connected to external power supply, or connected to G9SA-300-SC

Condition	Single	2 connected	3 connected	4 connected
Incandescent display lamps are used by auxiliary output and/or external indicator output	45m	40m	30m	20m
Incandescent display lamps are not used	100m	60m	45m	30m

When connected to F3SP-B1P

Condition	Single	2 connected	3 connected	4 connected
Incandescent display lamps are - used by external indicator output 2	40m	30m	25m	20m
Incandescent display lamps are - used by external indicator output 1 and/or, - used by auxiliary output 1	60m	45m	30m	20m
Incandescent display lamps are not used	100m	60m	45m	30m
